Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Claims 1-11 are pending in application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5, 9-11 are rejected under 35 USC 102(e) as being anticipated by Sung et al (US 6,226,684 B1).

Claims 1-5 and 9-11, Sung et al discloses a method of bypassing proxy settings of a computing device on a network wherein the proxy setting do not correspond to the network, the method comprising the steps of: receiving a request from the computer device in the form of a DNS or IP address; determining if the request is directed to a proxy server; and responding to the request with the identification of a proxy server associated with the network (see figure 1, column 3, 8, lines 57-67, 1-10, respectively).

{Sung et al teach that client 12 generates the IP address for the router 14 from a router IP address table 42 maintained by the client 12. A Domain Name Service (DNS) address may be utilized instead of an IP address to identify a router. The router 14 receives the message 24 and realizes that it cannot handle

the request. The router 14 must now redirect communications from the client 12 to a server. To accomplish this, the router 14 looks through a routing table 40, resident on the router 1, and ascertains that a server 16 is the next server slated to receive a client request. The router 14 then redirects the client 12 to the server 16 through a redirect communication 28. After the client 12 is redirected to the server 16 communication will continue between the two network device, bypassing the router 14, for a period of time}.

Allowable Subject Matter

4. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art made of record does not teach or fairly suggest in combination the method of claim 1 further comprising the steps of: receiving a request from the computing device directed to the proxy server associated with the network, after the step of responding; and determining the level of access to the proxy server; redirecting the computing device to a predetermined location if the level of access is determined to not include access outside of the proxy server; and allowing the request to proceed to the proxy server associated with the network if the level of access is determined to include access outside of the proxy server.
